DEUTSCHES METEOROLOGISCHES JAHRBUCH

Deutsche Seewarte

METEOROLOGISCHE BEOBACHTUNGEN

IN

DEUTSCHLAND

ANGESTELLT

AN

18 STATIONEN ZWEITER ORDNUNG

IM JAHRE

1880.

HAMBURG, 1882.

Gedruckt bei Hammerich & Lesser in Altona.

Einleitung.

Die Beobachtungen der acht Stationen der Deutschen Seewarte, fünf Stationen des Preussischen Meteorologischen Instituts, einer Sächsischen, zwei Württembergischen und zwei Badischen Stationen, die von den nachstehend unterzeichneten Herren geliefert wurden, sind in derselben Reihenfolge und in unveränderter Form, wie dies im Jahrgange 1879 der Fall, auch in diesem vorliegenden Jahrgange 1880 zur Veröffentlichung gelangt.

Einzelne kleine Aenderungen mögen in Nachstehendem Erwähnung finden.

a. Die Stationen der Deutschen Seewarte.

Die Correctionsgrössen der Barometer und der übrigen Instrumente sind auf den Stationen, die einer Inspection unterzogen wurden, als unverändert festgestellt, gleichfalls haben auch die übrigen durch anderweitige Vergleichungen untersuchten keine Aenderung erlitten.

Seit dem 1. Januar d. J. ist auf sämmtlichen Stationen das Minimum-Thermometer nicht wie bisher um 8^h a. m. gleich nach der Ablesung, sondern erst um 2^h p. m. eingestellt, so dass das absolute Minimum gerechnet ist von 2^h p. m. bis zum nächsten Morgen 8^h a. m. Die Einstellung des Maximum-Thermometers ist die gleiche, 8^h a. m., geblieben, auch sind die Eintragungen der Extreme in derselben Weise erfolgt, wie dies im vorigen Jahrgange angegeben ist.

Die Angaben des Maximum-Thermometers in Memel sind vom 21. Januar bis 31. Januar, für Februar, November und December in Wegfall gekommen, da das Instrument schlecht functionirte und durch ein neues ersetzt werden musste.

Die Barometerangaben in Borkum vom 27. Juni 8^h a. m. bis zum 29. 8^h p. m. waren ursprünglich unrichtig. Die hier veröffentlichten sind die nach Angaben der benachbarten Stationen an der Hand der Wetterkarten interpolirten, so dass die mit diesen Werthen berechneten Monats- resp. Jahresmittel als richtig angesehen werden können, wenngleich die einzelnen Angaben nur als annähernd correcte zu betrachten sind.

In Kiel betrug die Seehöhe des Barometers bis zum 14. Januar 8^h a. m. 48.2 Meter, seit 2^h p. m. des genannten Tages 50.5 Meter, desgleichen in Swinemünde bis zum 4. October 8^h a. m. 7.3 Meter, seit 2^h p. m. des 4. October 2.7 Meter.

Weitere Aenderungen gegen den vorhergehenden Jahrgang sind nicht vorgekommen. Vergleiche Jahrgang 1878 Seite III und IV.

b. Die Preussischen Stationen.

Für diese Stationen gilt dasselbe, was in den früheren Jahrgängen, besonders hinsichtlich der Publicationen in dem von 1878 gesagt ist.

Der vorliegende Jahrgang enthält gleichfalls wie der von 1879 die Beobachtungen der Station Aachen für Krefeld.

Genaue Messungen haben ergeben, dass in Berlin die Höhe des Barometers über dem Meere nicht, wie früher angenommen, 48 Meter sondern 50 Meter beträgt.

Arndt.

c. Die Station Leipzig.

Zu dem in den früheren Jahrgängen Gesagten ist nichts weiter hinzuzufügen.

Für Dr. **C. Bruhns**
Leppig.

d. Die Badischen Stationen.

Den Bemerkungen in den früheren Jahrgängen (besonders 1877 und 1878) ist noch folgende hinzuzufügen:

In allen Jahrgängen des vorliegenden Werkes sind die monatlichen Mittelwerthe der zu einer Beobachtungsstunde angestellten Beobachtungen des Luftdrucks, der absoluten und der relativen Feuchtigkeit bis auf Zehntel Millimeter resp. Procente angegeben, während in den Jahresberichten der meteorologischen Centralstation Karlsruhe die entsprechenden Werthe des Luftdrucks und der absoluten Feuchtigkeit bis auf Hundertel Millimeter, der relativen Feuchtigkeit aber nur auf ganze Procente berechnet sind. Diese Verschiedenheit der Berechnung in beiden Veröffentlichungen hat zur Folge, dass die in der Jahresübersicht des vorliegenden Werkes enthaltenen

Monats- und Jahresmittel der erwähnten Elemente meistens um einige Einheiten der letzten Decimalstelle von den entsprechenden Werthen in den Jahresberichten der Centralstation Karlsruhe abweichen.

Prof. Dr. **Sohncke.**

c. Die Württembergischen Stationen.

Auch bezüglich der Beobachtungen dieser Stationen kann, da dieselben keine Aenderungen erlitten, auf das in früheren Jahrgängen Gesagte verwiesen werden.

Prof. Dr. **von Schoder.**

In den Bemerkungen bedeuten die Abkürzungen und die den Congressbeschlüssen entsprechenden Zeichen:

ab. = Abends, mg. = Morgens,
tg. = Tags, mtg. = Mittags.
a. resp. a. m. = Vormittags,
p. resp. p. m. = Nachmittags,
a und p — als Exponenten bei der Tages-stunde — Abkürzung für a. m. und p. m.
0^p resp. 12^a = Mittag,
0^a resp. 12^p = Mitternacht,
n. = in der (vorhergehenden) Nacht,

● Regen,
✱ Schnee,
+ Schneegestöber,
▲ Hagel,
△ Graupeln,
≡ Nebel,

INHALT.

Meteorologische Beobachtungen

in

DEUTSCHLAND

von

18 Stationen II. Ordnung, sowie von 8 Normal-Beobachtungsstationen

und den Signalstellen der Deutschen Seewarte

für

1880.

Jahrgang III.

HAMBURG, 1882.

Gedruckt bei Hammerich & Lesser in Altona.

Jahrgang 1880.

I. Theil: Meteorologische Beobachtungen in Deutschland, angestellt an 18 Stationen zweiter Ordnung.

II. Theil: Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Temperatur, Windrichtung und Windgeschwindigkeit an den sieben Normal-Beobachtungsstationen der Deutschen Seewarte: Hamburg, Kiel, Wustrow, Swinemünde, Neufahrwasser, Memel und Keitum.

III. Theil: Zur Statistik der Stürme an der Deutschen Küste.

Einleitung zum II. Theile.

(Stündliche Aufzeichnungen.)

Ausser den Veröffentlichungen, welche sich auf dieselben Stationen und dieselben Registrir-Apparate wie im Jahre 1879 erstrecken, werden diesem Jahrgange noch folgende stündliche Aufzeichnungen beigefügt:

1) Die stündlichen Aufzeichnungen des Thermographen in Kiel
2) „ „ „ „ Anemographen „ „
3) „ „ „ „ Barographen „ Wustrow,
4) „ „ „ „ Anemographen „ Memel.

Bezüglich der Gattung, der Aufstellung und der Behandlung der Registrir-Apparate vergleiche man die Jahrgänge 1878 und 1879 dieser Publikation, „Aus dem Archiv der Deutschen Seewarte" (I. Jahrgang, pag. 18—25), sowie „Instruktion für den meteorologischen Dienst der Deutschen Seewarte" (pag. 24—35).

Hinzugefügt werden noch folgende Bemerkungen.

1) **Kiel.** Der Anemograph befindet sich hinreichend frei aufgestellt auf einem eigenen Gerüste in der Nähe der Sternwarte; Höhe des Schalenkreuzes über dem Erdboden $15^1/_2$ m. Der Hipp'sche Barograph ist im Erdgeschosse eine Treppe tiefer als das Stationsbarometer aufgestellt, der Hipp'sche Thermograph befindet sich in unmittelbarer Nähe des Psychrometers. Thermographen-Tabelle liegt vor seit dem 1. Juli 1879.

2) **Wustrow.** Der Barograph befindet sich in der Nähe des Stationsbarometers in einem ungeheizten Zimmer der Navigationsschule. Barographen-Tabellen liegen seit Anfang des Jahres 1879 vor, jedoch musste von der Publikation derselben für 1879 aus verschiedenen Gründen abgesehen werden.

3) **Swinemünde.** Mit dem Wechsel des dortigen Beobachters trat auch gleichzeitig eine Wohnungsänderung ein, wodurch sämmtliche Instrumente mit Ausnahme der Anemographen eine andere Aufstellung erhielten und die Seehöhe um 4.6 m erhöht wurde. Auch hier, wie in der früheren Wohnung, befindet sich der Barograph in demselben Zimmer und in derselben Höhe, wie das Stationsbarometer. Das Material wird sämmtlich vom dortigen Beobachter Herrn Kapt. Willert bearbeitet.

4) **Memel.** Bei der ursprünglichen Einrichtung im Jahre 1878 wurde der Anemograph auf dem Dache der Navigationsschule hinreichend frei aufgestellt. Aufzeichnungen bei dieser Aufstellung sind vorhanden von September 1876 bis April 1877. Mit dem Wechsel der Beobachter fielen seit dieser Zeit die Aufzeichnungen bis zum 1. Juni 1879 aus, da ein passender Ort zur Aufstellung der Anemographen nicht vorhanden war. Im Jahre 1879 wurde zu obigem Zwecke auf der Nordkante der Schanze nördlich vom Lootsen-Wachtgebäude ein 7 m hohes Holzhäuschen errichtet, auf dessen Spitze der Anemograph frei von allen Störungen aufgestellt ist. Anemographen-Tabellen liegen seit dem 1. Juni 1879 in ununterbrochener Reihenfolge vor. Das Material wurde von Herrn Elwenspök bearbeitet.

Bezüglich der stündlichen Aufzeichnungen der Anemographen sei noch bemerkt, dass die Angaben der Windrichtungen genau zu der Uhrzeit registrirt werden, welche am Eingange einer jeden Vertikalspalte sich befindet, während die neben der Windrichtung stehende Zahl die Durchschnittsgeschwindigkeit des Windes für die letztverflossene Stunde ergiebt.

Inhalt des II. Theiles.

Einleitung zum III. Theile.

(Zur Statistik der Stürme.)

Verzeichniss und Karte der Signalstellen, sowie Einrichtung des Sturmwarnungsdienstes an der deutschen Küste finden sich in der „Instruktion für die Signalstellen der Deutschen Seewarte", II. Ausgabe, und Jahresbericht I und II der Deutschen Seewarte. Von den Aufzeichnungen an den Signalstellen konnten in diesem Jahre nur jene von Rixhöft keine Verwendung finden. Auch von der Publikation der Aufzeichnungen an der Signalstelle Altona wurde der Nähe Hamburgs wegen abgesehen.

Da wesentliche Abänderungen auch in diesem Jahrgange nicht stattfanden, so wird bezüglich dieser Publikation auf die Einleitung zum III. Theile, Jahrgang 1878, verwiesen.

Der Uebersichtlichkeit halber sind die in diesem Theile angewandten Abkürzungen nochmals wiederholt.

Die römischen Zahlen I, II und III bezeichnen die Beobachtungsstunden resp. 8^h a. m., 2^h p. m. und 8^h p. m.

Die neben diesen stehenden und auch in den Bemerkungen angewandten und durch den Druck hervorgehobenen arabischen Zahlen geben das Datum.

Die Bewölkung wird durch die Ausfüllung der Kreise bezeichnet, wie dieses auch in den synoptischen Karten der Seewarte geschieht. Ebenso wurde für Regen das Zeichen • genommen.

Die eingeklammerten Zahlen neben der Bewölkung bezeichnen den Seegang und zwar:

0 = schlicht,	5 = ziemlich grobe (unruhige) See,
1 = sehr ruhig,	6 = grobe See,
2 = ruhig,	7 = hoch,
3 = leicht bewegt,	8 = sehr hoch,
4 = mässig bewegt,	9 = äusserst (gewaltig) hoch.

Inhalt des III. Theiles.

Januar. Memel. 1880.

„	27.	Mai 6. 8^h p. m. „ „ „ „ 756.2 „ 755.2.
„	29.	October ist zu lesen 2^h p. m. Barometer (Mittel) 756.2 statt 756.0.
„	30.	December 7. 8^h a. m. ist zu lesen Barometer 768.4 statt 769.4.
„	30.	„ 31. 8^h p. m. „ „ „ „ 758.8 „ 760.0, Mittel 754.9 statt 755.0.
„	32.	März 14. 8^h a. m. „ „ „ „ 769.0 „ 769.7, Mittel 2^h p. m. 765.7 statt 766.0.
„	32.	April 18. 8^h a. m. „ „ „ „ 759.3 „ 760.3.
„	33.	Mai ist zu lesen 8^h p. m. Barometer (Mittel) 761.0 statt 760.9.
„	33.	Juni 19. 2^h p. m. ist zu lesen Barometer 757.0 statt 757.6.
„	50.	April 30. ist zu lesen Luft-Temperatur (Minimum) —0.4 statt 0.4.
„	52.	Juli ist zu lesen unter Bemerkungen 10. III —ııı, 11. II —ııı, 31. II —ııı.
„	61.	Februar ist zu lesen Luft-Temperatur (Mittel) 10^h p. m. —0.30 statt 1.97.
„	107.	October 23. ist unter Bemerkungen zu lesen hinter „zeitweise ●“ und SW —ııı.

II.

Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Temperatur, Windrichtung und Windgeschwindigkeit an den sieben Normal-Beobachtungsstationen der Deutschen Seewarte:

Hamburg, Kiel, Wustrow, Swinemünde, Neufahrwasser, Memel, Keitum.

Jahrgang 1880.

HAMBURG.

Januar 1880. Luftdruck (in Millimetern). Hamburg.

Meteorologische Beobachtungen

in

Deutschland

angestellt

an

18 Stationen zweiter Ordnung

im Jahre

1881.

HAMBURG, 1883.

Gedruckt bei Hammerich & Lesser in Altona.

Einleitung.

Im vorliegenden Jahrgange 1881 sind, wie in dem vorhergehenden, die Beobachtungen der acht Stationen der Deutschen Seewarte, fünf Stationen des Preussischen Meteorologischen Instituts, einer Sächsischen, zweier Württembergischen und zweier Badischen Stationen, die von den unten verzeichneten Herren geliefert wurden, in derselben Reihenfolge und in unveränderter Form zur Veröffentlichung gelangt.

Einzelne kleine Aenderungen mögen im Nachstehenden Erwähnung finden.

a. Die Stationen der Deutschen Seewarte.

Die Korrektionsgrössen der Barometer und der übrigen Instrumente sind auf den Stationen, die einer Inspektion unterzogen wurden, auch in diesem Jahre als unverändert festgestellt.

Für Memel mussten die Angaben des Maximum-Thermometers, welches unbrauchbar geworden war, vom 1. Januar bis zum 20. März in Wegfall kommen.

In Kiel wurden seit dem 2. Februar die Maxima und Minima der Temperatur an neuen Instrumenten abgelesen (Casella Nr. 27048 und 27053).

In Hamburg wurden am 1. August mit der Uebersiedelung der Seewarte in das neue Dienstgebäude auf dem Stintfange auch die Instrumente hier aufgestellt. Hierdurch ergaben sich folgende Aenderungen:

Neue Höhe des Barometers über dem Meere 26.0 Meter (früher 19.7 Meter),
„ „ der Thermometer „ „ Erdboden 2.9 „ („ 6.5 „),
„ „ „ Regenmesser „ „ „ 1.45 „ (wie früher).

Die Thermometer-Aufstellung am neuen Dienst-Gebäude wurde mit jener der früheren Station verglichen hinsichtlich der resp. Temperatur-Angaben. Die Resultate dieser Vergleichung werden in dem Jahres-Bericht pro 1882 veröffentlicht werden; einstweilen kann so viel gesagt werden, dass ein wesentlicher Unterschied der Angaben nicht besteht.

Weitere Aenderungen gegen den vorhergehenden Jahrgang sind nicht vorgekommen. Vergleiche Jahrgang 1878, Seite III und IV.

Es sei noch bemerkt, dass in den Bemerkungen die Römischen Zahlen I, II, III bedeuten: zur Zeit der ersten, zweiten, dritten Termin-Beobachtung sind Hydrometeore beobachtet worden, die sich aber nicht gerade auf den Moment der Beobachtung zu beziehen brauchen.

b. Die Preussischen Stationen.

Für diese Stationen gilt dasselbe, was in den früheren Jahrgängen, speziell in dem von 1878, gesagt ist.

Die Seehöhe des Barometers in Kassel betrug für die Monate Januar, Februar und März 171 Meter, seit dem 1. April 204 Meter.

Als Korrektionsgrösse des Barometers in Aachen wurde +3.5 mm gefunden, welche Korrektion in diesem Jahrgange zur Anwendung gebracht wurde.

Arndt.

c. Die Station Leipzig.

Zu dem in den früheren Jahrgängen Gesagten ist nichts weiter hinzuzufügen. **Leppig.**

d. Die Badischen Stationen.

Zu dem in den früheren Jahrgängen Gesagten ist nichts weiter hinzuzufügen. Prof. Dr. **Sohncke.**

e. Die Württembergischen Stationen.

Auch bezüglich der Beobachtungen dieser Stationen kann, da dieselben keine Aenderungen erlitten, auf das in früheren Jahrgängen Gesagte verwiesen werden.

Prof. Dr. **von Schoder.**

In den Bemerkungen bedeuten die Abkürzungen und die den Kongressbeschlüssen entsprechenden Zeichen:

ab. = Abends, mg. = Morgens,
tg. = Tags, mtg. = Mittags.
a. resp. a. m. = Vormittags,
p. resp. p. m. = Nachmittags,
a und p — als Exponenten bei der Tages-stunde — Abkürzung für a. m. und p. m.
0^p resp. 12^a = Mittag,
0^a resp. 12^p = Mitternacht,
n. = in der (vorhergehenden) Nacht,

● Regen,
✳ Schnee,
+ Schneegestöber,
▲ Hagel,
△ Graupeln,
▬ Nebel,
⌓ Thau,
⊔ Reif,
⌒ Regenbogen,
V Duftanhang, Rauhfrost,
∞ Dunst oder Höhenrauch,

⌓ Nordlicht,
← Eisnadeln,
∾ Glatteis,
ш starker Wind,
ꓘ Gewitter,
< Blitze, Wetterleuchten,
⦶ Sonnenhof,
⊕ Sonnenring,
ש Mondhof,
⊽ Mondring.

Die Zusammenstellung der Beobachtungs-Stationen und der Vorsteher respektive Beobachter ist wie folgt:

Hamburg, im Mai 1883.

Dr. Neumayer.

INHALT.

Meteorologische Beobachtungen

in

DEUTSCHLAND

von

18 Stationen II. Ordnung, sowie von 4 Normal-Beobachtungsstationen

und den Signalstellen der Deutschen Seewarte

für

1881.

Jahrgang IV.

HAMBURG, 1883.

Gedruckt bei Hammerich & Lesser in Altona.

Jahrgang 1881.

I. Theil: Meteorologische Beobachtungen in Deutschland, angestellt an 18 Stationen zweiter Ordnung.

II. Theil: Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Temperatur, Windrichtung und Windgeschwindigkeit an den vier Normal-Beobachtungsstationen der Deutschen Seewarte: Hamburg, Wustrow, Memel und Keitum.

III. Theil: Zur Statistik der Stürme an der Deutschen Küste.

Einleitung zum II. Theile.

(Stündliche Aufzeichnungen.)

In dem vorliegenden Jahrgange gelangten aus mehreren Gründen die Aufzeichnungen der Registrir-Apparate nicht in demselben Umfange zur Publikation, wie dieses in dem zuletzt erschienenen Jahrgange (1880) der Fall.

Es sind in dem vorliegenden Jahrgange veröffentlicht:

die stündlichen	Aufzeichnungen	des	Barographen	in	Hamburg
„	„	„	„	Thermographen	in	Hamburg
„	„	„	„	Anemographen	„	„
„	„	„	„	Barographen	„	Wustrow
„	„	„	„	Anemographen	„	„
„	„	„	„	Anemographen	„	Memel
„	„	„	„	Barographen	„	Keitum
„	„	„	„	Anemographen	„	„

Zu den diesjährigen Aufzeichnungen ist Folgendes zu bemerken:

Die Aufstellung der Instrumente ist mit Ausnahme von Hamburg auf allen andern genannten Stationen dieselbe geblieben, die Bearbeitung der Registrirungen überall in derselben Weise gehandhabt, wie dies früher bereits näher angegeben in den Jahrgängen 1878 und 1879 dieser Publikationen, sowie in „Aus dem Archiv der Deutschen Seewarte" (I. Jahrgang, pag. 18—25) und in „Instruktion für den meteorologischen Dienst der Deutschen Seewarte" (pag. 24—35).

Hamburg. In dem Jahrgange 1880 sind im Monat Dezember die Werthe des registrirenden Barometers während der Zeit von 8^h p. m. am 5. bis 8^h a. m. am 6. doppelt wiedergegeben, wodurch die folgenden Werthe den Zeitangaben nicht entsprachen und auch die Mittelwerthe unrichtig wurden. Es sind aus diesem Grunde im vorliegenden Jahrgange 1881 die berichtigten Werthe des registrirenden Barometers für den Monat Dezember 1880 auf Seite 125 nochmals veröffentlicht.

Die stündlichen Aufzeichnungen des Barometers sind vom 21. September 1880 10^h a. m. bis zum 10. Mai 9^h a. m. den Angaben des Hipp'schen Barographen entnommen, vom 10. Mai 10^h a. m. bis 18. Mai 9^h a. m. wurden die Angaben des Schreiber'schen Barothermographen, welcher im neuen Dienstgebäude der Seewarte aufgestellt war, benutzt. Vom 18. Mai 10^h a. m. bis zum 1. Juni 9^h a. m. wurden die Angaben des inzwischen ebenfalls im neuen Dienstgebäude aufgestellten Hipp'schen Barographen und vom 1. Juni 10^h a. m. bis zum Jahresschlusse, mit Ausnahme weniger Stunden, wo der Apparat versagt hatte, die des Schreiber'schen Barographen für die Berechnungen verwerthet.

Die Temperatur-Angaben wurden für die Zeit, wo der Schreiber'sche Apparat nicht benutzt wurde, ausschliesslich dem Hipp'schen Thermographen entnommen und war derselbe bis zum 10. Mai 9^h a. m. im alten Dienstgebände, nach dieser Zeit bei dem neuen auf dem Stintfange aufgestellt.

Durch die Neuaufstellung des Schreiber'schen Barothermographen war eine merkliche Veränderung in den Reduktionskonstanten dieses Instrumentes bedingt worden. Die vorläufig angenommenen Werthe für Luftdruck und Temperatur sind nach einer im Jahre 1882 ausgeführten sorgfältigen Konstanten-Bestimmung korrigirt und hier zur Publikation gelangt.

Hierdurch erklären sich die mitunter nicht unerheblichen Abweichungen zwischen diesen Publikationen und denjenigen, welche täglich in den Wetterberichten veröffentlicht wurden.

Die Barometerstände des Jahres 1881 beziehen sich auf die Seehöhe von 19.7 Meter und der direkten Vergleichbarkeit wegen sind die im neuen Dienstgebäude in 26.1 Meter Seehöhe erhaltenen Angaben auf jene Höhe zurückreduzirt worden.

In der Aufstellung und Bearbeitung der Angaben des Anemographen in Hamburg ist keine Aenderung im Jahre 1881 eingetreten.

Ueber die Instrumente und Bearbeitung der Angaben derselben an den übrigen in Frage kommenden Stationen ist hier, wie bereits oben angeführt, weiter nichts zu bemerken.

Inhalt des II. Theiles.

Einleitung zum III. Theile.

(Zur Statistik der Stürme).

Verzeichniss und Karte der Signalstellen, sowie Einrichtung des Sturmwarnungsdienstes an der deutschen Küste finden sich in der „Instruktion für die Signalstellen der Deutschen Seewarte", II. Ausgabe, und Jahresbericht I und II der Deutschen Seewarte. Von den Aufzeichnungen an den Signalstellen konnten in diesem Jahre nur jene von Rixhöft keine Verwendung finden. Auch von der Publikation der Aufzeichnungen an der Signalstelle Altona wurde der Nähe Hamburgs wegen abgesehen.

Da wesentliche Abänderungen auch in diesem Jahrgange nicht stattfanden, so wird bezüglich dieser Publikation auf die Einleitung zum III. Theile, Jahrgang 1878, verwiesen.

Der Uebersichtlichkeit halber sind die in diesem Theile angewandten Abkürzungen nochmals wiederholt.

Die römischen Zahlen I, II und III bezeichnen die Beobachtungsstunden resp. 8^h a. m., 2^h p. m. und 8^h p. m.

Die neben diesen stehenden und auch in den Bemerkungen angewandten und durch den Druck hervorgehobenen arabischen Zahlen geben das Datum.

Die Bewölkung wird durch die Ausfüllung der Kreise bezeichnet, wie dieses auch in den synoptischen Karten der Seewarte geschieht. Ebenso wurde für Regen das Zeichen • genommen.

Die eingeklammerten Zahlen neben der Bewölkung bezeichnen den Seegang und zwar:

0 = schlicht,	5 = ziemlich grobe (unruhige) See,
1 = sehr ruhig,	6 = grobe See,
2 = ruhig,	7 = hoch,
3 = leicht bewegt,	8 = sehr hoch,
4 = mässig bewegt,	9 = äusserst (gewaltig) hoch.

Inhalt des III. Theiles.

Verbesserungen.

Seite 1. Januar 8^h a. m. ist zu lesen Luft-Temperatur (Mittel) −7.58 statt +7.58.
" 2. März 30. ist zu lesen Temperatur-Maximum 4.9 statt 4.4.
" 2. April 8^h a. m. ist zu lesen Luft-Temperatur (Mittel) 1.38 statt 1.83.
" 17. September 5. 8^h p. m. ist zu lesen Barometer 759.5 statt 757.9, Mittel 762.5 statt 762.4.
" 20. März 8^h a. m. ist zu lesen Luft-Temperatur (Mittel) −1.06 statt 0.90.
" 25. Januar 21. 8^h p. m. ist zu lesen Barometer 761.9 statt 761.3.
" 25. Februar 20. 8^h p. m. " " " " 772.3 " 773.3.
" 26. März 20. 8^h a. m. " " " " 753.4 " 754.4.
" 26. " 31. 8^h a. m. " " " " 763.5 " 764.0.
" 26. " 8^h a. m. " " " " (Mittel) 758.6 statt 758.7.
" 28. Juli 8^h p. m. " " " " (Mittel) 760.0 " 760.2.
" 28. August 8. 8^h p. m. " " " " 756.8 statt 751.8, Mittel 756.7 statt 756.5.
" 29. September 1. 8^h p. m. " " " " 761.7 " 762.7.
" 29. " 4. 2^h p. m. " " " " 755.3 " 753.3, Mittel 761.5 statt 761.4.
" 30. November 28. 2^h p. m. " " " " 750.1 " 751.9.
" 30. Dezember 2. 2^h p. m. " " " " 772.4 " 774.4.
" 33. Juni 6. 8^h p. m. " " " " 744.2 " 744.1.
" 46. Juli ist zu lesen Höhe des Barometers über dem Meer 19.7 Meter statt 26.0 Meter.
" 46. August 9. 8^h a. m. ist zu lesen Barometer 747.3 statt 748.3.
" 46. " 19. 8^h p. m. " " " " 751.2 " 752.2.
" 47. Oktober 4. 8^h p. m. " " " " 766.2 " 766.0.
" 51. Juni 22. ist zu lesen Temperatur-Maximum 33.0 statt 23.0.
" 68. April 19. ist zu lesen unter Bemerkungen II [illegible].
" 92. " 3. ist zu lesen Niederschlag 15.0 statt 15.6.
" 92. " 8^h a. m. ist zu lesen Absolute Feuchtigkeit (Mittel) 5.9 statt 6.0.
" 96. Dezember ist zu lesen Relative Feuchtigkeit (Mittel) 91.3, 78.9, 87.7 statt 91, 79, 88.

II.

Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Temperatur, Windrichtung und Windgeschwindigkeit an den vier Normal-Beobachtungsstationen der Deutschen Seewarte:

Hamburg, Wustrow, Memel, Keitum.

Jahrgang 1881.

Verbesserung zum Jahrgange 1880 (siehe Einleitung).

Dezember 1880. Luftdruck (in Millimetern). Hamburg.
